

Medical Emergency

This is a life threatening injury or illness. One or more major body systems (Respiratory, Circulatory, and Neurological) are involved. This patient needs advanced life support (ALS). Definitive care for this patient is a Trauma or Burn Center. TIME IS OF THE ESSENCE! Air transportation should be considered early.

ALS Air Transport

Other criteria for air medical transport is: lengthy extrication of the patient from the accident site, terrain or road conditions restrict ground transportation.

Rotor Wing: Rotor wing air ambulances have a 150 mile response area based on one fuel cycle. If injury location is outside of response area helicopter will have to refuel en-route.
